

Zariya Web App Functional Description

1. Product overview

Zariya is a web app that helps Indian couples plan destination weddings in a calmer, more organized way.

Indian destination weddings usually involve multiple events, many vendors, large guest lists, payment deadlines, budget decisions, RSVP tracking, and detailed event schedules. Zariya brings these planning details into one central workspace so the couple can clearly understand the status of their wedding at any point.

The app helps the user know:

- What needs to be done
- When it needs to be done
- Which event it belongs to
- Which vendor is involved
- What has been paid
- What is still pending
- What is over budget
- What needs attention next

Zariya is a planning operating system for the wedding. It is meant to replace scattered planning across WhatsApp messages, spreadsheets, separate notes, reminders, screenshots, and manual tracking.

The most important product rule is:

The user enters information once, and Zariya automatically uses that information wherever it is needed.

For example, if a guest is added once in the Guests page, that guest should automatically affect RSVP totals, event guest counts, and dashboard guest summaries. If a vendor payment is added once, it should automatically affect the Payments page, Budget page, Dashboard, and vendor payment status.

The user should not have to re-enter the same information in multiple places.

2. Branding and logo usage

The final edited Zariya logo provided by the user should be used everywhere in the app.

All logos visible inside the screenshot designs should be treated only as placeholders. Every logo placement in the sidebar, header, loading screens, onboarding screens, empty states, and any other interface area should use the final edited logo asset provided by the user.

The brand style should remain elegant, premium, warm, and culturally suited to Indian destination weddings.

The visual direction should use:

- Warm ivory backgrounds
- Gold and amber accents
- Soft pastel status colors
- Rounded cards
- Indian-inspired decorative motifs
- Elegant serif headings
- Clean readable tables
- Subtle shadows
- Simple line icons
- Spacious layouts

The app should feel calm and luxurious, not cluttered or overly corporate.

3. MVP structure

The MVP should focus on the core wedding planning workspace.

The main navigation should include:

- Dashboard
- Timeline
- Budget
- Payments
- Events
- Guests
- Vendors
- Settings

Each section should feel connected to the others. The app should not behave like separate independent pages. It should behave like one system where guest, vendor, event, payment, and budget information automatically flows into the places where it is needed.

The MVP data should be entered through simple forms, fields, dropdowns, checkboxes, date pickers, time pickers, editable text, number inputs, status chips, and notes.

Vendor details, payment information, event details, budget amounts, guest details, and checklist items are all manually entered as structured data.

4. Overall app layout

Most pages should follow a consistent structure:

- Left sidebar navigation

- Top wedding header

- Main content area

- Cards, tables, filters, and action buttons depending on the page

Left sidebar

The left sidebar contains the Zariya logo at the top and the main navigation items below it.

The active page should be highlighted with a soft cream or gold background and a gold accent line.

Navigation items:

- Dashboard

- Timeline

- Budget

- Payments

- Events

- Guests

- Vendors

- Settings

Clicking a sidebar item takes the user to that section.

Wedding header

Most pages should show the wedding header at the top.

The header includes:

- Wedding name

- Wedding location

Wedding date range
Search bar
Notification icon
User profile menu

Example:

Aisha & Rohan's Wedding
Udaipur, Rajasthan
14–16 November 2025

This information is entered during setup and then appears automatically across the app.

Global search

The search bar should allow the user to search across the wedding workspace.

Search should include:

Guests
Vendors
Events
Tasks
Payments
Budget categories
Notes

For example, if the user searches “Mehendi,” results can include:

The Mehendi event
Mehendi checklist items
Vendors linked to Mehendi
Guests invited to Mehendi
Payments related to Mehendi vendors
Notes containing the word Mehendi

Search results should be grouped clearly by type so the user understands what each result is.

Notifications

The notification icon should show important alerts.

Examples:

Payment due soon
Task overdue

Vendor payment pending
Budget category over budget
RSVPs pending
Event checklist incomplete

Clicking a notification should take the user to the related item or page.

5. First-time dashboard guidance

Because Zariya is a detailed planning app, a new user should receive quick guidance when they first open the Dashboard.

The first-time dashboard experience should include a short guided walkthrough, similar to the floating tooltip tours used in many web apps. These tooltips should point to important areas of the interface and explain what the user should set up first.

The guide should be quick, simple, and non-overwhelming.

First-time guide steps

Step 1: Wedding details

A tooltip points to the wedding header or setup area.

Text example:

“Start by confirming your wedding name, location, and date range. These details appear across your workspace.”

Step 2: Events

A tooltip points to the Events section.

Text example:

“Your selected wedding events appear here. Open each event card to add its date, time, location, checklist, vendors, and schedule.”

Step 3: Guests

A tooltip points to the Guests page.

Text example:

“Add your guests once. RSVP totals and event guest counts will update automatically.”

Step 4: Vendors

A tooltip points to the Vendors page.

Text example:

“Add each vendor once. Their category, payment status, and event links will be reused across Budget, Payments, Events, and Dashboard.”

Step 5: Budget

A tooltip points to the Budget page.

Text example:

“Set your estimated budget by category. Zariya will compare it with actual vendor and payment amounts.”

Step 6: Payments

A tooltip points to the Payments page.

Text example:

“Track due and paid payments here. Payment updates automatically affect your budget and vendor status.”

Step 7: Dashboard attention area

A tooltip points to the attention section.

Text example:

“This area shows what needs your attention next, such as overdue tasks, payment reminders, and budget warnings.”

The walkthrough should include:

Next
Back
Skip
Finish

After the user finishes or skips the guide, it should not appear automatically again. The user can restart it from Settings.

6. Setup flow

Before the user enters the full workspace, Zariya should collect the basic information required to generate the wedding plan.

Step 1: Wedding details

The user enters:

Couple names
Wedding name
Wedding location
Wedding start date
Wedding end date
Overall wedding budget, optional at first

This information appears in the app header and dashboard.

Step 2: Select wedding events

The user selects which events are part of the wedding.

Common event options:

Haldi
Mehendi
Sangeet
Wedding
Reception
Engagement
Cocktail
Welcome dinner
After party
Custom event

Only selected events should appear in the Events page.

If the user selects Haldi, Mehendi, Sangeet, Wedding, and Reception, Zariya should automatically create five event cards on the Events page.

These cards can start as mostly empty cards with the event name already filled in. The user can later open each card and add date, time, location, checklist edits, vendors, notes, and run-of-show details.

If the user wants another event later, they can add it using the “Add new event” button.

Step 3: Choose planning phase

The app asks how far away the wedding is.

Options can include:

- 12 months before
- 10 months before
- 8 months before
- 6 months before
- 4 months before
- 2 months before
- 1 month before
- Wedding week

This determines which planning phase is most relevant when the user first enters the Timeline page.

Step 4: Budget setup

The user can set an overall wedding budget and category-wise estimates.

Default budget categories:

- Venue
- Catering
- Decor
- Photography
- Entertainment
- Hospitality
- Transport
- Outfits
- Invitations
- Gifts
- Miscellaneous

The user can edit category names and amounts later.

7. Dashboard page

The Dashboard is the main overview page.

It answers:

“What is happening with my wedding, and what needs my attention next?”

The Dashboard should show the most important information from across the app in one place.

Dashboard sections

The Dashboard includes:

- Wedding countdown
- Planning progress
- Guest summary
- Attention-needed tasks
- Event itinerary
- Budget summary
- Vendor and payment summary

Wedding countdown

The countdown shows how many days are left until the wedding starts.

This is calculated automatically from the wedding start date.

Example:

108 days to go

Planning progress

Planning progress shows how much of the planning checklist has been completed.

Example:

68%

On track

This percentage is calculated from completed timeline tasks.

Guest summary

The guest summary shows RSVP progress.

Example:

176 / 250 accepted

This comes automatically from the Guests page.

250 is the total number of guests entered.

176 is the number of guests marked as Accepted.

Clicking the guest summary should open the Guests page.

What needs your attention next

This section shows the most important upcoming or overdue planning items.

Examples:

Confirm decor vendor

Payment due to Royal Events

Invitation follow-up

Final menu tasting

Review over-budget category

Complete pending event checklist items

Each item should show:

Task title

Category

Due date

Priority

Priority can be High, Medium, or Low.

Clicking an item should open the relevant page or detail view.

Event itinerary

This section shows the main wedding events in chronological order.

Example:

Haldi — 14 Nov 2025 — 10:00 AM–12:00 PM

Mehendi — 14 Nov 2025 — 04:00 PM–07:00 PM

Sangeet — 14 Nov 2025 — 08:00 PM–11:00 PM

Wedding — 15 Nov 2025 — 04:00 PM–07:00 PM

Reception — 16 Nov 2025 — 08:00 PM–11:00 PM

This information comes from the Events page.

Clicking an event opens that event's detail page.

Budget summary

The dashboard shows:

- Total budget
- Amount spent
- Remaining amount
- Budget status

These numbers come from the Budget and Payments sections.

Vendor and payment summary

This section shows:

- Upcoming payments
- Vendors needing attention
- Confirmed vendors
- Pending vendor statuses

This data comes from the Vendors and Payments pages.

8. Timeline page

The Timeline page is for wedding planning tasks.

It answers:

“What should I do, and when should I do it?”

This page is different from the wedding-day schedule. It focuses on planning tasks before the wedding.

Timeline layout

The page includes:

- Task summary cards
- Planning phase sidebar
- Task list
- Filters
- Phase progress
- Upcoming task panel

Summary cards

The top cards can show:

- Tasks completed
- Upcoming this month
- Overdue or high-priority tasks

These numbers are calculated from the task list.

Planning phases

The planning phases are:

- 12 months before
- 10 months before
- 8 months before
- 6 months before
- 4 months before
- 2 months before
- 1 month before
- Wedding week

Each phase has a pre-made checklist suitable for most Indian destination weddings.

The user can:

- Mark tasks complete
- Change task status
- Change due date
- Edit the task text
- Delete a task
- Add a custom task

Task statuses

Statuses:

- To do
- In progress
- Done
- Overdue

Timeline filters

Filters can include:

- All tasks
- Pending
- In progress
- Completed
- Overdue
- Category
- Assignee, if used
- Sort by due date

Default planning checklist

12 months before

- Set wedding date range
- Decide destination city
- Create rough guest count
- Set overall budget
- Create initial event list
- Shortlist venues
- Shortlist planner, if needed
- Create vendor category list
- Discuss key wedding priorities
- Set up Zariya workspace

10 months before

- Compare venue options
- Confirm main venue
- Create first guest list
- Set budget categories
- Shortlist photographer
- Shortlist decor vendor
- Shortlist caterer
- Shortlist makeup artist
- Shortlist entertainment options
- Create first payment tracker

8 months before

- Enter venue details in Zariya
- Confirm photographer
- Confirm decor direction
- Confirm catering direction

- Decide rough event sequence
- Begin outfit planning
- Begin invitation planning
- Create first event timeline
- Add confirmed vendors to Zariya
- Review budget health

6 months before

- Confirm decor proposal
- Confirm mehendi artist
- Confirm entertainment/DJ
- Draft invitation list
- Send save-the-dates
- Confirm catering tasting date
- Start outfit fittings
- Assign due dates to major tasks
- Review vendor payment schedule
- Update budget estimates

4 months before

- Finalize event themes
- Confirm menu for each event
- Finalize invitation design
- Confirm vendor deliverables
- Review pending vendor confirmations
- Confirm ceremony requirements
- Plan guest welcome basics
- Update payment due dates
- Review pending tasks
- Check budget warnings

2 months before

- Send formal invitations
- Track RSVPs
- Finalize event floor plans
- Finalize decor details
- Finalize sangeet performance order
- Finalize makeup schedule
- Confirm photography schedule
- Confirm catering guest estimates
- Review pending payments
- Prepare final event checklists

1 month before

- Close RSVP follow-ups
- Finalize guest count
- Confirm vendor arrival times
- Confirm event-wise run-of-show
- Confirm VIP seating notes if needed
- Confirm ceremony items
- Confirm outfits and accessories
- Confirm final menus
- Review all unpaid payments
- Review all event checklists

Wedding week

- Confirm all event timings
- Confirm all vendor timings
- Confirm guest count for each event
- Confirm payment status
- Review event checklists
- Review dashboard alerts
- Mark completed items
- Confirm no critical task is pending
- Finalize wedding-day plan

9. Full timeline calendar

The Full Timeline calendar shows planning tasks by date.

It answers:

“What is due on each day?”

The page should include:

- Month view
- Week view
- Filters
- Upcoming deadlines
- Legend
- Overall progress

Each calendar item represents a planning task or deadline.

Clicking a calendar item opens the task details.

If several tasks are on one date, the calendar should show a “+ more” option that opens the full list for that day.

The calendar view and list-style Timeline page should use the same task data. If the user edits a task in one place, it should update in the other place automatically.

10. Events page

The Events page shows all wedding celebrations selected during setup or added later.

It answers:

“Which events are part of the wedding, and how ready is each event?”

Pre-created event cards from setup

When the user selects events during setup, Zariya should automatically create empty event cards for those selected events.

For example, if the user selects:

Haldi
Mehendi
Sangeet
Wedding
Reception

Then the Events page should automatically show cards for Haldi, Mehendi, Sangeet, Wedding, and Reception.

These cards should be editable. At first, they may contain only the event name and default checklist. The user can open each event and fill in:

Date
Start time
End time
Location
Vendors involved
Guest count through invited guests
Notes
Run-of-show

Checklist progress
Budget, if being tracked for that event

Add new event

The “Add new event” button lets the user create an event that was not selected during setup.

Examples:

Welcome dinner
Cocktail
After party
Pool party
Baraat
Brunch
Custom event

After saving, the new event should appear in:

Events page
Dashboard itinerary
Master Wedding Timeline
Guest invited-event options
Vendor preferred-event options

Event card information

Each event card should show:

Event name
Date
Time
Location
Progress
Budget, if applicable
Number of pending tasks

Example:

Mehendi
14 Nov 2025
04:00 PM–07:00 PM
Lotus Garden
64% ready
5 pending tasks

Clicking an event card opens that event's detail page.

Event filters

The Events page can include filters:

- All events
- Upcoming
- Ceremonies
- Celebrations
- Completed

Celebration journey

The right-side journey panel shows the event flow in chronological order.

Example:

- Haldi
- Mehendi
- Sangeet
- Wedding
- Reception

The order comes from the event dates and times.

11. Event detail page

The Event Detail page focuses on one specific event.

It answers:

“What is planned for this event, what still needs to be done, who is invited, which vendors are involved, and what is the event schedule?”

Event detail sections

The page includes:

- Event overview
- Checklist
- Timeline / run-of-show
- Guest count

Vendors involved
Notes
Budget summary, if applicable

Event overview

The overview shows:

Date
Time
Location
Progress percentage
Short event description

The progress percentage comes from the event checklist.

Event checklist

Each event starts with a default checklist.

The checklist controls the event progress bar.

The user should be able to:

Mark checklist items complete
Click directly on checklist text and edit it
Delete a checklist item using a small minus button
Add a new checklist item
Change item status to To do, In progress, or Done

This allows the pre-made checklist to stay useful while still being flexible for small wording changes or removing items that do not apply.

Event run-of-show

The run-of-show shows the event schedule.

Example for Mehendi:

04:00 PM — Guest arrival & welcome drinks
04:30 PM — Bridal mehendi begins
05:00 PM — Family mehendi stations open
05:30 PM — Chaat & mocktail service
06:15 PM — Games, music & candid moments
06:45 PM — Group photos
07:00 PM — Event wrap

These schedule items should also appear in the Master Wedding Timeline.

Guest count

The event guest count should be calculated from the Guests page.

For example, if 120 guests are invited to Mehendi and 96 have accepted, the Mehendi page should show:

120 invited
96 expected

The invited number comes from guests whose invited events include Mehendi.

The expected number comes from accepted guests whose invited events include Mehendi.

Vendors involved

Vendors linked to this event should appear here.

Example:

Mehendi Artist Collective
Lotus Garden
Design Affairs
Flavors of India
Bridal Glow Studio
Shutter Story

These vendors come from the Vendors page or from the vendor selection inside Add/Edit Event.

Notes

The notes section is for simple manual text notes related to the event.

Example:

Use mogra and marigold accents around the main lounge.
Keep fans near the artist seating area.
Reserve one quiet corner for bridal photos.

12. Default event checklists

Each selected event should start with a practical default checklist. These checklists are editable.

Haldi checklist

- Confirm Haldi date and time
- Confirm Haldi location
- Confirm guest list for Haldi
- Finalize Haldi decor setup
- Confirm seating arrangement
- Confirm turmeric/ubtan materials
- Confirm outfits for Haldi
- Confirm photographer timing
- Confirm snacks and beverages
- Confirm music or dhol setup
- Confirm cleanup plan
- Confirm transition to next event

Mehendi checklist

- Confirm mehendi date and time
- Confirm mehendi location
- Confirm bridal mehendi artist
- Confirm guest mehendi artist count
- Confirm guest mehendi stations
- Approve bridal seating setup
- Finalize floral lounge decor
- Confirm snacks and mocktails
- Confirm lighting for photos
- Confirm photographer timing
- Prepare stain-removal/touch-up kit
- Confirm event wrap-up plan

Sangeet checklist

- Confirm Sangeet date and time
- Confirm Sangeet venue
- Confirm stage layout
- Confirm sound and lighting
- Confirm DJ or entertainment
- Finalize performance list
- Finalize performance order
- Confirm rehearsal plan
- Confirm couple entry cue
- Confirm family entry cues

Confirm dinner timing
Confirm after-party or dance floor timing

Wedding checklist

Confirm wedding date and time
Confirm ceremony location
Confirm priest/pandit timing
Confirm muhurat
Confirm mandap setup
Confirm varmala setup
Confirm baraat timing
Confirm bridal entry timing
Confirm ceremony items
Confirm family seating
Confirm photography shot list
Confirm post-ceremony transition

Reception checklist

Confirm reception date and time
Confirm reception venue
Confirm guest list for reception
Confirm stage and couple seating
Confirm decor setup
Confirm lighting and sound
Confirm welcome/check-in setup
Confirm couple entry timing
Confirm speeches or toast plan
Confirm dinner service timing
Confirm photography area
Confirm final send-off plan

Custom event checklist

Confirm event date and time
Confirm event location
Confirm guest list
Confirm vendors involved
Confirm setup requirements
Confirm food and beverage plan
Confirm music or entertainment
Confirm photography timing
Confirm run-of-show

Confirm event notes
Confirm budget, if applicable
Confirm wrap-up plan

13. Add/Edit Event page

The Add/Edit Event page lets the user create or update an event.

It includes:

Event details
Vendor selection
Timeline builder
Cancel button
Save event button

Event details

Fields:

Event name
Date
Start time
End time
Location
Short description

The user should be able to create events of any duration.

The time selection should allow:

Events shorter than one hour
Custom start and end times
Multiple events on the same day
Overlapping events

Vendor selection

The page should list vendors already entered in the Vendors page.

Each vendor has a checkbox.

Checking a vendor links that vendor to the event.

This only connects the existing vendor record to the event. It does not create duplicate vendor entries.

Timeline builder

The timeline builder lets the user create sub-events inside an event.

Examples:

Guest arrival
Bridal entry
Dinner
Performances
Photos
Event wrap

The user should be able to create sub-events for any duration, including less than one hour.

Examples:

04:00 PM–04:15 PM
04:15 PM–04:45 PM
05:10 PM–05:30 PM

Overlapping sub-events should be allowed because wedding activities often happen in parallel.

The app can show a gentle warning if times overlap, but the user should still be able to save.

Save event

Saving an event updates:

Events page
Event detail page
Dashboard itinerary
Master Wedding Timeline
Linked vendor event lists
Event guest count, based on guests invited to that event

14. Master Wedding Timeline

The Master Wedding Timeline is the actual wedding schedule.

It answers:

“What is happening during the wedding days, at what time, and where?”

This is different from the planning Timeline page.

Timeline views

The page should include:

Calendar view

List view

Print layout, as a simple clean schedule view

Calendar view

Calendar view shows wedding dates as columns and time blocks inside each date.

Each block represents a main event or sub-event.

Examples:

Haldi Ceremony

Bridal Mehendi

Sangeet Sound Check

Wedding Ceremony

Dinner Service

Reception Welcome

Dance Floor & DJ

List view

List view shows the same information in chronological order.

Example:

14 Nov 2025

10:00 AM–12:00 PM — Haldi

04:00 PM–07:00 PM — Mehendi

08:00 PM–11:00 PM — Sangeet

Schedule overview

The overview panel can show:

Total events
Main events
Sub-events
Total duration

These numbers are calculated from the event and sub-event schedule.

Overlaps

Overlapping schedule items should display side by side, similar to a calendar app.

This allows the schedule to handle parallel activities such as vendor setup, makeup, guest welcome, photos, and event transitions.

15. Guests page

The Guests page manages the guest list and RSVP status.

It answers:

“Who is invited, who accepted, who is pending, who declined, and which events are they invited to?”

Guest summary cards

The top cards show:

Total guests
Accepted
Pending RSVP
Declined

These numbers are calculated from guest records.

Guest table

Each guest row should include:

Guest name
Phone or email
Side or segment
RSVP status

Invited events
Notes

Example:

Sunita Mehra
Bride side
Accepted
Haldi, Wedding, Reception
Vegetarian, VIP seating

Guest filters

Filters can include:

All guests
Accepted
Pending
Declined
Bride side
Groom side
Family
Friends
Event

Add guest

The Add Guest form should include:

Name
Phone
Email
Side or segment
RSVP status
Invited events
Notes

The invited events field controls event guest counts.

For example, if a guest is invited to Mehendi and their RSVP is Accepted, that guest should automatically be counted in the Mehendi expected guest count.

Automatic guest calculations

Guest data automatically updates:

Dashboard guest summary
Guests page totals
Event guest counts
RSVP overview
Guest segment counts

16. Vendors page

The Vendors page stores vendor information manually.

It answers:

“Who are the vendors, what category are they in, what is their status, and what payments are connected to them?”

Vendor summary cards

The page shows:

Total vendors
Contracts confirmed
Pending / review
Payment follow-ups

These numbers are calculated from vendor records.

Vendor directory

Each vendor row includes:

Vendor name
Category
Contact person
Phone/email
Contract status
Payment status
Notes

Example:

The Grand Udaipur
Venue
Ritesh Mehta

Confirmed
Deposit paid
Ballroom and stay block secured

Vendor filters

Filters include:

All vendors
Confirmed
Pending
In review
Payment due
Category dropdown

Vendor actions

Each vendor row should allow:

View vendor
Edit vendor
Add payment
Link to event
Change contract status
Change payment status
Delete vendor

17. Add/Edit Vendor page

The Add/Edit Vendor page creates or updates a vendor profile.

Vendor fields

The form includes:

Vendor name
Category
Business or brand name
Service city
Contact person
Phone number
Email address

Alternate contact
Preferred communication method
Contract status
Payment status
Total agreed amount
Advance amount
Next payment due date
Notes
Preferred events served

All details are entered manually into the form.

Vendor category options

Default categories:

Venue
Decor
Catering
Photography
Makeup
Mehendi artist
Entertainment
Choreographer
Priest
Transport
Hospitality
Other

Contract status options

Not contacted
Shortlisted
In review
Pending
Confirmed
Cancelled

Payment status options

Unpaid
Advance due
Deposit paid
Partial paid

Paid
Overdue

Preferred events served

The user can select which events the vendor is connected to.

Example:

Wedding
Reception
Mehendi
Sangeet
Haldi

If the vendor is linked to Mehendi, the vendor should automatically appear in the Mehendi event detail page.

Save vendor

Saving a vendor updates:

Vendors page
Vendor count cards
Event vendor sections
Budget page, if amount is entered
Payments page, if due date or payment amount is entered
Dashboard alerts, if action is needed

18. Budget page

The Budget page shows the overall financial health of the wedding.

It answers:

“How much was planned, how much is actually committed, how much has been paid, and what is over budget?”

Budget summary

The top cards show:

Total budget
Amount spent
Amount committed
Remaining amount

Definitions:

Total budget = the overall planned wedding budget
Amount spent = payments marked as paid
Amount committed = confirmed unpaid vendor amounts
Remaining amount = total budget minus spent and committed

Overall budget health

The chart shows:

Spent
Committed
Remaining

This is calculated automatically.

Category-wise budget

Budget categories show planned amounts by category.

Default categories:

Venue
Catering
Decor
Photography
Entertainment
Hospitality
Transport
Outfits
Invitations
Gifts
Miscellaneous

Each category should compare:

Estimated budget
Actual amount
Paid amount
Pending amount

Estimated vs actual

This section shows where actual costs are higher or lower than planned.

If actual is greater than estimated, the category should show an over-budget warning.

Overspending alerts

The app should highlight categories where spending is over budget.

Example:

Decor is ₹1,75,000 over budget

Hospitality is ₹1,20,000 over budget

Clicking the alert should open the relevant category.

19. Budget categories page

The Budget Categories page gives detailed information for each category.

Each category card shows:

Category name

Primary vendor, if any

Estimated amount

Actual amount

Paid amount

Pending amount

Budget health

When expanded, the category can show:

Vendor details

Payment schedule

Manual notes

Spending breakdown, if entered

Over-budget action

If a category is over budget, the three-dot menu should include:

Edit estimated budget
Update budget to actual
Add payment
Add note
View linked vendors

The important action is:

Update budget to actual

This means the user accepts the current actual price as the new budget.

Example:

Decor estimated budget: ₹17,50,000
Decor actual: ₹19,25,000
Over budget by ₹1,75,000

If the user clicks “Update budget to actual,” the estimated budget becomes ₹19,25,000 and the warning is removed.

The payment records stay the same. Only the planned budget amount changes.

The app should ask for confirmation before applying this.

20. Payments page

The Payments page tracks what is due and what has been paid.

It answers:

“What payments are coming up, what is still pending, and what has already been paid?”

Upcoming payments

The upcoming payments table shows:

Vendor
Purpose
Amount
Due date
Priority

Priority can be based on due date.

Example:

Due in 7 days or less = High

Due in 8–15 days = Medium

Due later = Low

Pending balances

Pending balances show unpaid amounts grouped by payment type.

Example:

Deposits pending

Installment balances

Final settlements

Vendor-wise dues

This table shows:

Vendor

Category

Total committed

Paid

Balance due

Next due date

Balance due is calculated as:

Total committed - paid amount

Paid payments

The paid payments table shows:

Paid date

Vendor

Amount

Method

Payment methods can include:

Bank transfer

UPI

Card

Cash
Other

Add or update payment

A payment can be entered from the Payments page or from a vendor record.

Payment fields include:

Vendor
Category
Purpose
Amount
Due date
Paid date, if paid
Payment method
Status
Notes

Updating a payment automatically updates:

Payments page
Vendor payment status
Budget spent amount
Budget pending amount
Budget category health
Dashboard payment summary

21. Data connection rules

Zariya should behave as one connected system.

Guest connection

Guest information is entered once in Guests.

It then updates:

Dashboard guest summary
Guests page totals
Event guest counts
RSVP overview
Guest segment counts

Vendor connection

Vendor information is entered once in Vendors.

It then updates:

- Vendor directory
- Event vendor sections
- Budget categories
- Payments page
- Dashboard alerts

Payment connection

Payment information is entered once.

It then updates:

- Payments page
- Vendor payment status
- Budget spent amount
- Budget pending amount
- Budget category health
- Dashboard summary

Event connection

Event information is created from setup or Add New Event.

It then updates:

- Events page
- Event detail page
- Dashboard itinerary
- Master Wedding Timeline
- Guest invited-event options
- Vendor preferred-event options

Budget connection

Budget information updates from:

- Category estimates
- Vendor amounts
- Payment records

Dashboard budget numbers should be calculated from this connected data.

22. Settings page

The Settings page should allow basic workspace setup and changes.

Settings should include:

- Wedding name
- Couple names
- Wedding location
- Wedding dates
- Selected events
- Budget categories
- Total budget
- Notification preferences
- Restart dashboard guide

The user should be able to add, remove, rename, or reorder events from Settings.

If an event is changed in Settings, the change should reflect across Events, Dashboard, Guest invited-event options, Vendor preferred-event options, and the Master Wedding Timeline.

23. Final functional summary

Zariya is a connected planning workspace for Indian destination weddings.

The Dashboard shows what needs attention.

The Timeline shows what planning tasks need to be done.

The Events page shows all selected wedding celebrations.

The Event Detail page manages one event's checklist, schedule, vendors, guests, and notes.

The Guests page manages RSVP and invited-event information.

The Vendors page stores vendor contact, contract, payment, and event-link information.

The Budget page tracks estimated versus actual spending.

The Payments page tracks due, pending, and paid vendor payments.

The Master Wedding Timeline shows the actual wedding-day schedule.

The core rule is:

Enter once, update everywhere.

This makes Zariya useful because the couple can add information in one place and trust the app to reflect it across the entire wedding workspace.

The final feeling for the user should be:

"I know what is happening with my wedding, what still needs to be done, and what needs my attention next."
